Abstract (en)

[origin: WO2007115760A2] The invention relates to a method for configuring a device for influencing the displacement of several displaceable furniture parts (3) which are driven in a displaceable manner by means of a drive unit with the aid of a control unit for controlling the displacement of the displaceable furniture parts (3) in relation to a fixed furniture part (2). One front part (11a) of a displaceable outer furniture part (11) at least partially covers the outside of one front part (9a, 10a) of a displaceable inner furniture part (9, 10) when the relevant furniture parts (9, 10, 11) are in the closed position at least in relation to the fixed furniture part (2). According to the invention, in order to harmonise the displacement influence of the displaceable furniture part, at least one inner furniture part (9, 10) is allocated to an associated outer furniture part (11) such that in an activated configuration mode, said allocation of the at least one inner furniture part (9, 10) to the outer furniture part occurs as a result of a sequence of opening and/or closing movements of the furniture parts (9, 10, 11) which are associated with each other.
