Abstract (en)
[origin: DE102006001598A1] The needle has a material that is reabsorbed by a body. The material is adjusted by variation of its composition such that the time period of the reabsorption is determined. The material is loaded with information on the basis of indication specific frequency for further amplification of acupuncture effects. The material is composed such that the energy process is used during the reabsorption for stimulation of acupuncture points. An independent claim is also included for an application of an acupuncture needle for acupuncture of an entire body.
