Abstract (en)  
[origin: FR2899191A1] The installation has releasable vehicles (1) locked in stations or in an intermediate station after passing on a released circuit. Each station has an automatic shunting mechanism (DM) adapted to remove the vehicles from a slow creep in the circuit and to transfer the vehicles toward a loading/unloading post (15) which effectuates loading/unloading based on the order of arrival. A preceding vehicle that is already removed from the creep is reintegrated in the creep at the place of another removed vehicle based on an established program.
