Abstract (en)

[origin: FR2899220A1] The device has an assembled screw for displacing recovery tubes (41) between a service position and a neutral position. Tubular nozzles (43) are adapted to intercalate between filling spouts (32) and upper ends (41b) of the recovery tubes in the service position. The tubular nozzles are adapted to axially reduce in length in an elastic manner to compensate height difference between the filling spouts.
