Abstract (en)
[origin: WO2007115627A1] The invention relates to an immersion pump having a housing which holds a motor and an impeller which is driven by said motor, and which housing has a suction opening for sucking in liquid and an outlet opening for dispensing the liquid. In order to further develop the immersion pump in such a way that it is cost-effective to assemble, it is proposed according to the invention that the housing has an upper part, a central part and a lower part which are embodied as separate housing parts, wherein the central part holds the motor and the upper part engages around the central part and can be detachably connected to the lower part.
