Abstract (en)

[origin: WO2007095699A2] Method for determining a gas leak in a distribution system connected to a gas source or supply, in which the rate of flow of gas from the gas source to said distribution system is detected, the method being characterized in that the distribution system is connected to a dynamic suite comprising at least one buffer chamber and a control means capable of interrupting the gas supply to the device when a quantity of gas greater than or equal to a first predetermined quantity fills the buffer chamber.
