Abstract (en)

[origin: WO2007110432A1] The invention concerns a method for creating a multimedia scene comprising at least one object animation, designed to be reproduced on at least one radio communication terminal. According to the invention, at least one on said animations is associated with a non-temporal animation variable, representing a state of at least one object of said scene, of at least one element of said terminal, and/or a state of at least one associated communication network, said variable providing a time-based function for said animation. The invention also concerns a method for reproducing a multimedia scene comprising at least one object animation, on a radio communication terminal.
