Abstract (en)

[origin: US2007237497A1] A means for influencing the temperature of flowable media, especially of lubricants found in a lubricant system, having a line through which the medium flows and at least one element ( 11 ) which is assigned to the line section ( 1, 5 ) for influencing the temperature and which can be activated by supplying energy, characterized in that at least one element ( 11 ) is located within the line section ( 1, 5 ) in the flow path of the medium and that the wall of the line section ( 1, 5 ) has a connecting means ( 9 ) for supplying energy to at least one element ( 11 ) located in the line section ( 1, 5 ).
