Abstract (en)  
[origin: EP2003009A1] A control panel, in particular for controlling an air-conditioning assembly for vehicles, comprising: - a support (12); - at least one control knob (16), which can turn with respect to the support (12); and - at least one driven member (46), which can turn with respect to the support (12) and is connected to the control knob (16) by means of gears (20, 34, 50). The support (12) comprises first and second retention means (38, 56) co-operating with complementary retention means (26, 54) of the control knob (16) and of the driven member (46) for constraining the control knob (16) and the driven member (46) with respect to the support (12) in respective pre-set angular positions. The support (12) comprises a first body and a second body (14, 42), which can be coupled to one another and are equipped with disengagement means (60, 62) co-operating with said first and second retention means (38, 56) for disengagement of the control knob (16) and the driven member (46) from the respective retention means (38, 56) when the first and second bodies (14, 42) of the support (12) are coupled to one another.
