Abstract (en)
There is provided an escalator step in which a riser can have a unique appearance, and predetermined strength and rigidity can be secured, and an escalator fitted with this step. For this purpose, a metallic reinforcing member formed with an opening is provided between brackets provided at both sides under a step tread to support the step tread from the downside, and a fiber-reinforced plastic made riser having predetermined translucency is fixed to the metallic reinforcing member so as to cover the opening. Some of light passing through the opening of the metallic reinforcing member is transmitted from the back surface side to the front surface side of the riser.
