Abstract (en)

[origin: EP2003236A2] The method involves activating a draining device i.e. controllable running pump, after an action of individual phases for removing fluid from a water container. A spring dryer phase (PS) is executed with the activation of the draining device before a rinse-off phase (PRi). Wet wiping clothes or wiping mops are dewatered by the draining device, and the spring dryer phase is executed before rinse-off with a maximum speed at a range of 500 to 1000 revolutions per minute. An independent claim is also included for a washing machine comprising a housing and a water container.
