Abstract (en)

[origin: EP2003268A2] The attachment (8) has a locking nut (24) and a latch (30) respectively supported on interior and exterior faces (28, 32) of a partition (6) and cooperating relative to each other for locking a body (14) of the attachment to fix the body on the partition. The latch is mobile between a deployed position and a retracted position in which the attachment is inserted and withdrawn via the partition, where the latch projects outside the body and supported on the face (32) in the deployed position. A displacement mechanism (50) displaces the latch between the deployed and retracted positions.
