Abstract (en)  
[origin: EP2003270A2] The system comprises an externally-threaded (2), holder shell (1) for the post (or rod), which is screwed into the ground. In a first stage the holder is constructed by pushing a number of holder shells (5, 6, 7) onto a matching core (4), relative to which they cannot rotate. The holder, once screwed (3) into the ground, surrounds the post with clearance. This clearance is filled completely. The filler introduced is e.g. sand, gravel, chippings, concrete or other bulk material. Independent claims are included for the following: (A) the method of fixing the rod or post; (B) and the tool (3) used with the fastening system.
