Abstract (en)

[origin: WO2007116187A2] The invention relates to a protective glove, characterised in comprising at least one elastic body (17), fixed to the chain mail material, for pulling the chain mail material of at least one finger of the glove (16), in the direction or essentially in the direction of the longitudinal axis thereof and in the direction of the wrist piece (12). The elastic body(ies) (17) is(are) preferably arranged on the section (11) for covering the hand. Said elastic body(ies) (17), preferably in the form of flat hairpin springs, better shape the chain mail to the fingers of the hand and, in particular, restrict or prevent the presence of surplus chain mail at the ends of the fingers of the user of the glove.
