Abstract (en)

[origin: WO2007122458A2] A guide device (10) for the axial sliding of a first telescopic element (11), in particular connected to the seat-part (22) of a seat (100), with respect to a second fixed element (12), in particular connected to the base of the seat (100), wherein the second fixed element (12) comprises a first profile shaped so as to define internally- first vertical guide means (25), with which interposition means (19) cooperate, interposed between the first telescopic element (11) and the second fixed element (12), in order to promote the reciprocal axial sliding of the first telescopic element (11) with respect to the second fixed element (12).
