Abstract (en)

[origin: WO2007104863A2] The invention relates to an implantable reinforcement plate (1), characterized in that it has a first stable configuration, in which it has a first general shape curved substantially inwards on a first general curvature, and in that it can be deformed in order to change to a second stable configuration, in which it has a second general shape curved substantially inwards on a second general curvature, which is the inverse of the first general curvature. Surgically implantable plates.
