Abstract (en)  
[origin: WO2007102730A2] A portion package, in particular for a semi-fluid product such as a jelly, gel or paste, comprises a tub-like container (1) with a base (2) from which a wall extends all round which has an at least almost flat upper edge (4). The wall (3) can be compressed over at least a part of the height thereof, and with the base (2) bounds a product space (6) closed with a foil. The upper edge (4) comprises at least a first and a second outward directed lateral extension (11,12) on either side of the product space (6) so as to provide at least two opposite gripping surfaces. In a semi-fluid product a mixture of one or more active constituents in a predetermined mutual ratio and a predetermined dosage are processed at least substantially homogeneously into a jelly, gel or paste to form an at least practically form-retaining body (20).
