Abstract (en)
[origin: WO2007118537A1] For the supply of machines, namely packaging machines, with web-shaped packaging material which is present as a bobbin, a bobbin store (15) having a portal (16) is set up, in which the bobbins (10..13) are stored on pallets (14). A portal robot (20) having an articulated arm (27) transfers bobbins (10..13) as required to winding assemblies (29..32) which are arranged outside the portal (16). Said winding assemblies (29..32) transport the material webs to opposite sides in the direction parallel to the longitudinal extent of the portal (16) to the use machines.
