Abstract (en)

[origin: WO2007118646A1] A spool device (10) is described, in particular for a narrow embossing film strip, wherein the spool device (10) has a spool core sleeve (12), onto which the embossing film strip is crosswound, and a pair of flanged discs (16) which are attached at the ends of the spool core sleeve (12) which face away from one another. Each flanged disc (16) has an axially extending centring projection (18) on the inside for centring the spool core sleeve (12) and an axially extending square projection (20) on the outside which is aligned axially with the inner-side centring projection (18), for the form-fitting connection to a coupling device (24) of a processing machine (26).
