Abstract (en)
[origin: WO2007071098A1] The present invention relates to a facade glazing element having a stepped glazing with a first and a second windowpane (13, 15), wherein the dimensions of the first windowpane (13) exceed those of the second windowpane (15) by a specified amount. The first and second windowpanes (13, 15) are each firmly bonded at their edge to a mounting frame (35) made of wood or wood-based material by means of a first and a second adhesive layer (37, 39). On the mounting frame (35) is provided a room-side fastening possibility or fastening means for fastening the facade glazing to a facade. By virtue of the room-side fastening possibility for the facade glazing element, disassembly is possible without damaging the surrounding components or connections to the building, thereby making repair glazing, for example, easily possible.
