Abstract (en)
[origin: WO2007115880A2] The interior of a refrigerating device is subdivided, by means of a thermally insulating intermediate base, into two areas (4, 6) wherein the temperature can be controlled independently from each other. The intermediate base (5) comprises a plate (38, 39, 40) which is bordered on the front and rear edges thereof by extrusion profiles (41, 42, 48).
