Abstract (en)
[origin: WO2007101292A1] The invention relates to a firearm bolt protector, for a bolt having a handle movable relative to the bolt between a cocked and a decocked position. The protector includes a sleeve for protecting the bolt. The protector holds the bolt to prevent rotational movement of the bolt within the sleeve, such that the handle can be moved between the cocked and decocked positions whilst the bolt is within the sleeve. In the preferred embodiment, this is achieved by a recess inside the sleeve, into which a ridge on the bolt slides when the bolt is inserted into the sleeve.
