Abstract (en)

[origin: WO2007116169A1] The invention concerns a generator of messages (2), for a telecommunication system, comprising: an interface with at least one service provider (3); an interface with at least one message routing point (8) for transmitting messages to users (U1, U2, U3) according to a specific messaging mode; a database (24) of groups of message models, at least one group being identified by a group identifier; means for, upon reception of a request (R1) from a third party indicating a group identifier and a user identifier, for determining, based on said identifiers, a message model from the model database and a message format associated with a messaging mode; means for generating a message (M1) based on the determined message model and format and for transmitting same at the routing point to the user (U1) identified in the request.
