Abstract (en)

[origin: EP2005861A1] The system has a guiding piece (3) comprising a rectilinear channel portion arranged parallel to a sliding direction and a zigzag channel portion endowed of a set of stable positioning areas of an arm (1) in a sleeve locked by a flexible spring rod (13) e.g. metal rod. The portions are coupled to one of ends of a zigzag channel of the latter section by a part laterally opening in the former portion rectilinear to neighboring of an inlet orifice of a circuit elastically restraining a rod to the former portion and to another end by a part elastically releasing the rod to the former section. Independent claims are also included for the following: (1) a system for fixing a backrest to a base of a seat (2) a method for mounting a backrest to a base of a seat.
