Abstract (en)

[origin: EP2005929A1] The device (1) has an inflatable top layer made of a set of adjacent elements that are secured together. A support zone i.e. central zone (12c), is designed to support a sacrum zone of an individual's body. A top layer made of inflatable elements is individualized in unitary manner, whose width is smaller than height. Width of the individualized inflatable elements of the central support zone is smaller than the width of the inflatable elements of an end zone adjacent to the central support zone.
