Abstract (en)

[origin: EP2006097A2] Bearing unit (01) comprises a bearing outer ring (09) arranged in a bearing housing (07) to move in a plane perpendicular to the axis of the bearing unit using piezoelectric adjusting elements. An independent claim is also included for a method for reducing oscillating amplitudes of a bending mold of a printing couple cylinder. Preferred Features: The piezoelectric adjusting elements are arranged at an angle of 80-100% in relation to the bearing axis. A spring arrangement is arranged opposite the piezoelectric adjusting elements. The plane of the adjusting elements extends perpendicular to the axis of the bearing unit.
