Abstract (en)
[origin: EP2006100A2] The web-fed press has multiple printing units, particularly offset printing units, for the static printing of substrate (14) with a print image that is the same for all printed signatures. A control unit automatically checks processing by a processing unit, particularly printing by an inkjet unit (17) at a desired position (19) on a substrate surface of a web substrate. The control unit authorizes processing by a suitable processing unit, particularly dynamic printing by a suitable inkjet unit.
