Abstract (en)  
[origin: EP2006203A1] The device (10) has a conveying device for conveying off bags i.e. valve bags (4), filled with bulk goods e.g. dusting material. A monitoring device (20) is associated with the conveying device and monitors tightness of the filled bags. The monitoring device includes a light weight sensor that directly captures escaping of the bulk goods from the bags to obtain a parameter for the bag tightness. A weighting device (15) in the conveying device is series connected to the monitoring device. A gap is formed between preceding and subsequent conveying units (12b, 12c). Independent claims are also included for the following: (1) a packaging machine for filling bulk goods into bags comprising a filling element (2) a method for filling bulk goods into bags.
