Abstract (en)  
The package (10) formed from at least one flexible film delimiting an initially closed space comprises: - two principal longitudinal walls (14A, 14B); and - at least one intermediate wall (16A, 16B) disposed between the two principal walls (14A, 14B) in order to delimit the said initially closed space, the or each intermediate wall (16A) being at least locally curved towards the interior of the initially closed space. It has a weakened line (30) produced at least partially in a curved region (19A) of the intermediate wall (16A) and continuing over at most three-quarters of the width of each principal wall (14A, 14B).
