Abstract (en)  
A device for handling a hose is provided. The device allows the hose (3) to be pulled out from a hose storage space (5) and is adapted to return the hose (3) to the hose storage space (5). The device comprises separately movable first hose guiding means (7) and second hose guiding means (9). The device is further characterised in that the first hose guiding means (7) is vertically moveable in a first plane (P1) in said hose storage space (5), and in that the second hose guiding means (9) is vertically moveable in a second plane (P2) in said hose storage space (5). A method for handling a hose and a fuel dispensing unit comprising a device for handling a hose are also provided.
