Abstract (en)

[origin: EP2006449A2] The machine has a cutting/milling arrangement (2) and a running gear in a chassis (1), and track laying units (6A). A parallelogram mounting (8) has top and bottom link components (8A,8B) and pillar (8C) which are connected to the chassis such that the link components and pillar are able to move while the height of the chassis is being adjusted. The parallelogram mounting has a piston-and-cylinder arrangement (8D) to adjust the link components and pillar. A driver's station (10) is fixed to pillar for adjusting the height of the chassis.
