Abstract (en)
[origin: EP2006482A2] The blind has lamellas (2) at longitudinal sides of the blind over a hinge connection and connected with textile carrier elements. The hinge connection is formed between a retaining element (5) and a fastening element (6), where the retaining element is fixedly connected with the lamellas. The fastening element is firmly connected with the carrier elements. The carrier elements are transversely guided into a region of the fastening element relative to a lifting device in a section wise manner. The carrier elements are formed of two supporting cables (12, 13).
