Abstract (en)

[origin: WO2007111481A1] Disclosed herein is a body of vacuum cleaner and handy type cleaner that includes a dust container detachably mounted on a body of the vacuum cleaner and configured to perform vacuum cleaning via air suction in a detached state. The dust container of the vacuum cleaner permits vacuum cleaning not only in a state of being mounted in the body, but also in a state of being detached therefrom. Accordingly, the vacuum cleaner of the present invention can eliminate needs of separately buying a larger vacuum cleaner and a smaller vacuum cleaner, thereby being more economical for consumers.
