Abstract (en)
[origin: WO2008105752A1] The present invention is directed to a modified release dosage form for delivering at least one pharmaceutically active ingredient. The dosage form has a first immediate release core for an active ingredient and an osmotic core or osmotic chamber containing at least one pharmaceutically active ingredient that can be the same or a different active ingredient contained in the first immediate release core. A shell having one or more portions surrounds the first immediate release core and osmotic core/chamber. The osmotic chamber includes a barrier layer that is substantially impermeable to the pharmaceutically active ingredient contained therein.
