Abstract (en)
[origin: WO2007107669A2] The invention concerns a foldable trestle (10) having a folded position and a deployed position, said trestle comprising a cross-member (12) having longitudinal (L) and transverse (I) dimensions defining a lower surface (F), first and second pairs of legs (14, 16), hinge means enabling the legs (14a, 14b, 16a, 16b) of each of the pairs of legs to be mutually spaced apart when the trestle (10) is in deployed position, and to extend against one another when the trestle is in folded position, the hinge means (18, 20) enabling further each of the pairs of legs to be pivoted about an axis transverse to the cross-member such that in folded position, the pairs of legs (14, 16) extend beneath said lower face of the cross-member. The invention is characterized in that the trestle further comprises first locking means (22, 24) linking one side (140b) of one of the legs (14b, 16a) of at least one of the pairs of legs (14, 16) to the cross-member (12) so as to lock in deployed position said pair of legs relative to the cross-member.
