Abstract (en)

[origin: WO2007119009A1] This invention relates to a mobile laboratory for analysis of pathogenic agents. According to the invention, the laboratory (1) consists of a transportable mobile container defining a basic chamber (10), the space inside said chamber being isolated from the outside by means of a sealed box (5) inserted in said room, said box comprising a sealed zone for analysis of pathogenic agents (50d, 500d) fitted with a pressure device that maintains a negative pressure inside said zone relative to its external environment, characterised in that the sealed box (5) includes a first protective equipment airlock (500a), - a second sealed airlock (500b) communicating between said sealed zone for the analysis of pathogenic agents and said first airlock, a third sealed airlock (500c) communicating between said sealed zone for the analysis of pathogenic agents and said first airlock, wherein the zone for analysing pathogenic agents (500d) can only be entered through said second airlock.
