Abstract (en)
[origin: WO2007122303A1] The invention concerns an instrumented roller bearing device comprising a rotating ring (5), a non-rotating ring (4), and a sensing assembly (3) provided with a sensor block (11) including an outer annular portion (11b) and means for axially retaining the sensor block on the non-rotating ring arranged on the outer annular portion (11b). The external diameter of the outer annular portion (11b) is smaller than the inner diameter of a front radial surface (4b) of the non-rotating ring.
