Abstract (en)
[origin: EP2008801A1] The system (100) has an image data storage unit (13) in which image data with reference values and tolerance ranges are stored. A printing machine (2) has an evaluation device (11) with a camera system to control a printed image and a goods usage counter (14). The counter is coupled with a controller of the machine, where the controller stops the machine when a predefined number of goods usage is reached. The evaluation device and an evaluation module (12) are connected with the storage unit such that the data of the storage unit is accessed and worked with consistent evaluation logic. An independent claim is also included for a method for supplying a wastepaper-free good to folding and bonding stations of a folded box bonding machine, by a production system.
