Abstract (en)

[origin: DE102007030509B3] The device (2) has an out flow pipe (6), particularly torpedo tube, has a supporting frame (8) for supporting and guiding an immersion body (4) in the out flow pipe and units for starting the immersion body from the out flow pipe. The out flow pipe is guided by a pressure body (10) of the submarine. The supporting frame is openly formed, such that a chamber is formed between the out flow pipe and immersion body. The chamber freely passes through in direction transverse to its longitudinal axis.
