Abstract (en)
[origin: EP2009154A1] A continuous leather yarn capable of being applied to an existent loom, and being continuously inwoven alternately as wefts from both end sides of the weaving width direction, and being inwoven as a warp continuing in the weaving longitudinal direction, and a very innovative leather yarn textile woven by using the continuous leather yarn are provided. The continuous leather yarn is formed by cutting a leather sheet material 1, 11 processed to have a desired thickness dimension t into cut pieces 2 having a width dimension w and a length dimension L; joining the cut pieces in their longitudinal direction to form a cut-piece-joined continuous body 3; press-compressing the cut-piece-joined continuous body to have a thickness dimension to; and slitting it to have a width dimension wo.
