Abstract (en)
[origin: EP2009191A2] The marquee has a rotatably stored fabric shaft (2) from which a cloth (3) is unwound using an extended profile (4) driven using another hinged bracket, where each bracket is designed to be two-part using a rear hinged bracket unit (11) and a front hinged bracket unit (12) along the driven direction. Hinged brackets are subject to tension along an open direction using two spring units (14, 15). The spring units are invasively assigned to respective hinged brackets, and are arranged at the rear and front hinged bracket units, respectively.
