Abstract (en)

[origin: EP2009205A1] The device (3) has a handle (10) displaced between a rear rest position, in which a rear door (2) is free, and a front stop position, in which the door is stopped in open position. The handle has a rod (9) axially moved in a support between the rest and stop positions, while permitting rotation of the handle from an angle of 90 degrees between the rest and stop positions. The rod and support have a support plate (19) for guiding the rod towards the rest position during the movement of the rod between the rest and stop positions. Pins of the rod are cooperated with grooves of the support.
