Abstract (en)

A method of producing crude oil, comprising: a) drilling a well (1) traversing a crude oil containing formation (2); b) creating a cavity (8) in the vicinity of the well; c) creating a flow channel (3A,3B) between the cavity and the well; d) inducing crude oil (20) to flow from the crude oil containing formation into the cavern the flow channel a section of the well, which is equipped with a valve (13); e) closing the valve when a substantial portion of the cavity is filled with crude oil; f) injecting water into the cavity, thereby inducing crude oil to flow from the cavity via the flow channel and the well to a wellhead (15) at the earth surface; g) interrupting water injection into the cavity when a substantial portion of the cavity is filled with water; h) pumping water from the cavity and filling at least a substantial portion of the cavity with a gaseous fluid; i) opening the valve and repeating steps d)-h). The method may make use of a one way valve (13) nitrogen and a salt layer (4).
