Abstract (en)
A liquid crystal display panel is divided into a plurality of regions and a plurality of regions extending in respective striped shapes. The plurality of regions and the plurality of regions are arranged so as to alternately align. A plurality of sub-pixels are assigned to a first group and a second group, three sub-pixels of the first group constitute a pixel, and three sub-pixels of the second group constitute a pixel. Each pair of regions adjacent to each other constitutes each set, and parallax barriers are formed in a portion on a black matrix between adjacent sets and portions on the black matrix on outer sides of the regions positioned at ends, respectively.
