Abstract (en)

[origin: US2009003638A1] A hearing device and an associated method are provided. The hearing device includes a behind-the-ear part and an in-the-ear part that are connected to one another by a connecting element. The behind-the-ear part has a switching element arranged to be functionally connected to the connecting element such that at least two switching positions of the switching element can be engaged by a movement of the connecting element.
