Abstract (en)  
[origin: WO2007122081A1] A door for a refrigerating unit comprises a door leaf (2) which can be hinged to a body (1) of the refrigerating unit and a decorative element (3) which is superimposed on the door leaf (2) in such a way as to be adjustable in position. The decorative element (3) has a central cutout, through which a central region of the door leaf (2) is exposed. A groove (22) open towards this central region is formed on the door leaf (2) in order to accommodate a profile element (30) which conceals a gap (19) between door leaf (2) and decorative element (3).
