Abstract (en)

[origin: WO2007125260A2] Oil filtration device for an internal combustion motor and a motor comprising such a device. The oil filtration device is intended for internal combustion motors and comprises a filter body comprising means for attachment on the motor and designed to bear a supplementary filter for filtering the oil circulating in a bypass circuit (71). The filter body (10, 10') forms a chamber containing the supplementary filter (20) and comprising an oil intake conduit (14) with an outlet into the upper part (12) of the filter body to which the supplementary filter (20) is attached, to feed into the upper part of the supplementary filter (20), and a maintenance and sealing flap (30, 30') is attached to the lower part of the filter body in such a way that it can be dismounted if necessary.
