Abstract (en)

[origin: WO2007125249A1] The invention relates to a method of producing a fibrous layer intended to form a preform of an axisymmetric composite part having a non-developable surface, characterized in that it comprises the steps consisting in: defining an annular space (23) with a first and second fabric (20, 21) respectively delimiting an internal periphery and an external periphery; arranging fibres between the fabrics (20, 21) by placing the fibres in the annular space in at least one direction and by holding said fibres on the fabrics by stitching; performing circular connection stitching in the vicinity of the internal periphery of the annular space (23); and cutting the fibrous layer thus formed in the annular space (23) in order to extract it from the fabrics.
