Abstract (en)

[origin: WO2007116184A1] The invention concerns a laminated glazing comprising two substrates (S1, S2) between which is arranged an active system (3), characterized in that the glazing is provided with first means for peripheral sealing (10) of said active system (3), in particular against water in vapour form, comprising at least one joint based on thermosetting polymer(s) selected among the following polymer families: ethylene vinylacetate, polyisobutylene, butylic rubber, polyamide, and second sealing means (11), in particular against liquid water, said second sealing means (11) being positioned between the substrates and peripherally relative to the first sealing means (10).
