Abstract (en)

[origin: US2009243285A1] The invention relates to a device for connecting a high-pressure line to a tubular high-pressure reservoir in the wall of which at least one connecting bore for the high-pressure line is configured. An end of the high-pressure line is covered by a half-shell of a shell-type securing device. The shell-type securing device encloses a peripheral surface of the high-pressure reservoir, the half-shells being braced against each other.
